

While the BPL is a new technology, and should be explored further, In it's current state, it just produces too much noise on radio frequencies that were meant for over the air communications.

Please oppose the institution of BPL at this time.

I am sure that a suitable solution to providing broadband to households will come about eventually.

As it stands now, the small bandspace given to HAM users is already so small, where else are they supposed to go?

I mean if a HAM station was ever producing the kind of interference that BPL does, the FCC would shut the station DOWN!

The HAM community is a great asset this country, and should not have to deal with this kind of assault on the frequencies set aside for them.

Thank you for your consideration.
